

Helpful Apps and Websites to help with homework

With the increase in mobile technologies and computers that are now affordable and available to us there has never been an easier time to get online. Here is a list of useful websites, games and apps that can help to support your children with their learning through fun games, videos and support their learning at home as well as school.

Websites

Maths Warriors (<http://www.mathswarriors.co.uk/>) Maths Warriors is a great website that covers a wide range of skills for all age groups. The website gives tips and guides for different ways to work out sums and give test style questions to help you test your child at home.

Maths Playground (<http://www.mathplayground.com>) is full of fun maths games which support numeracy skills through fun games some games even linked to their favourite TV characters.

Cool Maths For Kids (<http://www.coolmath4kids.com/>) A popular website with KS2! Lots of games and activities linked to number, multiplication, division and shape.

BBC

to use for any activity with

Bitesize (<http://www.bbc.co.uk/education>) is one of the best sites your child. The website covers all ages with more easier fun games

on the Cbeebies page and more complex questions and games on the KS2 page. The website even gives links to other websites that help with literacy and numeracy skills.

Videos

Here are some videos to help with how to work out problems, tips and tricks and fun games and songs for developing maths at home.

- Mr Hammond's Maths

(<https://www.youtube.com/channel/UCVeIQlu1fp6tm1aJLc2zUuw>)

- Theatre Maths

(<https://www.youtube.com/channel/UCCJbM7nzLYuvZ7-aNMCHbg>)

- Math's Online

(<https://www.youtube.com/user/MathsOnlineAU>)

- Maths and Learning Videos for Kids

(<https://www.youtube.com/user/CommonCore4Kids>)

- Maths Antics

(<https://www.youtube.com/user/mathantics>)

Apps

Mobile technology is everywhere! At Nant Y Parc we use iPads and other mobile technologies to support learning through games, tools and apps designed to share ideas and games. Here are some of the best!

Math Bingo- This is one of the children's favourites! You have to work out sums on a bingo grid. You can create an account and unlock creatures for beating your time! Great for mental maths and the pressures of tests.

Maths, age 4-6 (Also do all ages) This app is great for younger children but you can download different apps for your child's age. Another classroom favourite with many topics and in fun colourful ways.

Explain Everything

My personal favourite! Explain Everything isn't a maths game but a presentation app. It allows you to draw, write, add text and images while it records you. This is a great way to work out math problems and watch them back to remember how to work out a problem. You could even record your own for your child and see them follow your guide!

Math Shake

I fantastic problem solving app! This gives you test questions which you can literally pull apart. Just like explain everything it gives the children a blank page to work out their question and then gives you the answer!

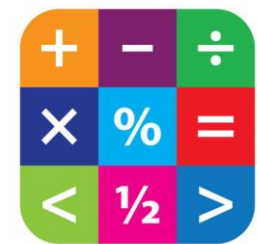

Math Duel

Download at your own risk! This is a great app for two players! You compete against each other for maths questions. The player that answer the most questions right, the quickest wins! You can even change the settings so you can have different levels for each player! Be warned this game is highly addictive and can get competitive!

Maths Vs Zombies

This game is amazing! Just like the classic Plants V Zombie game this forces the player to answer maths questions quickly (great for test practice) if you're not quick enough the zombie gets you! Great for boys!

Maths Tutor

A great free app that covers loads of different maths skills. This app tutors you along the way giving you tips and mini tests at the end of each skill great for practicing skills at home!

Maths Games for Math Genius

A great free game! This app makes each question a level. See how far you can go, but be warned it gets harder and harder. Very addictive!

There are hundreds of apps and websites for developing maths, language and other skills. Have a look and try out the free ones! You don't know you might find something amazing!

I hope this guide helps you and if you need any advice on new websites, downloading apps or any general queries just ask a member of staff to help.

Many thanks

Mr. S. Tilley
